New Spicer® Off-Highway Transmission Service Kits Increase Vehicle Uptime

MAUMEE, Ohio – Dana Incorporated has introduced Spicer® off-highway transmission kits to help reduce downtime and keep vehicles and equipment in service. The kits provide the parts needed to perform transmission service and repair quickly and efficiently.

“The major benefit of our off-highway transmission service kits is all of the components are clearly marked in one box so service professionals can complete repairs without delay,” said Bill Nunnery, senior director, sales and marketing, global aftermarket for Dana. “When vehicles and equipment are not in operation, no revenue is generated. Spicer off-highway transmission service kits empower technicians, increase uptime, and improve profitability.”

Spicer off-highway transmission kits provide the right quantities of components to efficiently perform transmission service and repair. Featuring improved packaging of o-rings, seals and gaskets, the kits are grouped by original-equipment manufacturer (OEM) usage versus transmission configuration. A useful addition to the kits is the o-ring identification chart that lists each part number, quantity, and dimensional information, as well as color identification that match the markings on the o-rings. Each illustration is drawn to full size to further aid in identification.

New off-highway kit coverage is available for the most popular transmissions, including the Spicer T12000 series as well as T13/TE17 and TE27/32 series transmissions, and each kit contains the necessary components to meet the needs of these popular models.

To learn more about the Spicer off-highway transmission service kits, contact a Dana sales representative or visit www.DanaAftermarket.com.

About Dana in the Aftermarket
